Thread: [RAT Works on my own computer , doesnt come into client when ran on other computer](#)

rahulanand99 - July 19, 2020, 2:36 pm

async rat portforwarded via nvpn , would run and pop in my client through sandboxie or normally on same system , but it doesnt work when i run it on other system no client gets connected

ps- im not using no ip or dns service , just portforwarding and automatically selected the ip , correct me if this could be the problem

Semmenial - July 19, 2020, 9:36 pm

That shouldn't be the problem. Are you sure that you are using the correct IP for the slaves to connect to?

Sounds like a port forwarding issue in my opinion, post your settings.

vreiko - July 22, 2020, 11:48 am

im having the same exact issue as OP. have made exceptions for my port as TCP and UDP, port forwarded on with my isp and port forwarded on nvpn, but no connections besides my own pc

nickdns87 - July 22, 2020, 12:30 pm

could you help me send me a dm

Fluxe - July 22, 2020, 7:08 pm

try disabling windows defender and that might fix it. Ive noticed even with some files added to exclusions (not async specifically as i havent tested it) they will run but not connect for some reason, disabling it all together fixed my issue

Eladictocosity - July 26, 2020, 11:41 pm

Check on canyouseeme.org is your port actually open?.

Kalakutta - July 27, 2020, 4:21 am

Have you done port forwarding?

Raskolle - July 27, 2020, 5:29 am

i think there is a problem on portforwarding. you can use vpn to solace but first of all check your modems and pc firewall..

Longdog - July 27, 2020, 4:36 pm

I run a setup service: <https://hackforums.net/showthread.php?tid=6097699> if you need some help. If it's just a simple fix I probably won't even charge you.

That is the problem. You should use your Public IP address when building.

Semmenial - July 28, 2020, 3:58 pm

Have you been able to fix this problem OP by using your ip address from <https://whatismyipaddress.com> ?

I would obviously suggest use a VPN with portforwarding to mitigate your risks when Rattng.
