Thread: [Last post not showing](#)

Big E - July 19, 2020, 7:43 pm

Hi,

When viewing HF through my iPhone I can't see the last poster information anywhere. This happens on the homepage and search pages.

On PC there is another column on the right with the thread title, last poster and time. There isn't on mobile.

So the question is, is this intentional? If so, is there a setting for me to activate it? Or is this problem caused by my phone itself (maybe it's not big enough screen or whatever)?

Thanks

Big E - July 20, 2020, 11:14 am

I can't embed images while on my mobile either. I've tried manually adding the img tags, and using the button on the post reply page. It just displays the images like the ones in my OP. Can't get them to embed at all.

Just wondering whether the main issue with not seeing the last post information happens for other members accessing HF via their mobile?

You can if you zoom down to like 75% I believe.

I lied it's 50 and the image bb doesn't embed on hackforums for some reason
