Thread: [Cheating on smurf in CSGO](#)

?Slick - July 21, 2020, 12:10 pm

Hey guys,

I was wondering how you keep your main accounts safe while cheating on smurfs?

Would it be worth it to make a 2nd windows account for cheating to avoid faceit AC picking it up on your main account?

Thanks in advance!

FaceIT AC rarely bans for cheating unless it's on their servers. Only instance when I heard of them banning for cheats without being used is when you leave a cheat driver running in the background, or aimware related stuff on your pc (loader downloaded for example).

To stay safe whilst cheating, second account, don't re-use info (email, phone number, etc), and ofcourse reboot after you want to play clean on your main.

If you'd wanna be extra extra safe, play through a gaming vm on your smurf maybe?
