Thread: [PPD \(Post Per Day\) sorting for Sig Market](#)

bluud - July 22, 2020, 4:31 am

Title.

When I'm searching for signatures to purchase my tabs often look like this:

Typically not looking for people who post 0.03 times/day. So an ability to sort by this and accurately estimate a price which I think is fair rather than opening 8gb worth of ram in tabs would be nice!

Fortunate - July 22, 2020, 4:40 am

I was just about to suggest this myself when looking at the signature market yesterday. The current sorting is basically for post amount and price per day. Most of the ones on the top aren't active. This is a good suggestion in my opinion.

Yep. Pretty much every current sorting method has a negative.

Even the price descending sorting which you think would find you HQ sigs to buy but instead it's just spammed with people selling for 1m bytes.

I also think along the same lines. I was just checking out how much people were charging for signatures (not want to buy any yet) and noticed that its was pretty difficult finding someone whos active. The info link from individual members listings already takes us to a page where data about post per day in the past 30 days is given. So it would be really useful to just add it to a separate column in the siggy market.
