Thread: [\[RARE \] Bitcoin Vanity Addresses \(8 DIGITS\)](#)

Sakurro - July 22, 2020, 6:11 am

Hi everyone,

I am selling the private keys (full ownership) of these very rare BTC vanity addresses:

These are for sale:

? 5 Digits:Pattern: 1Asset

Address: 1AssetcG2c8dxZKc2sE2HE7WZyVk9DdmQM

? 8 DIGITS (EXTREMELY RARE):Pattern: 1Notewise

Address: 1NotewiseyHSKPh4SnSMXi5WU3DVxzb43G

Pattern: 1adeption

Address: 1adeption5dFCJ2UBnq8EzNny2XS8sagP

Pattern: 1Bedchair

Address: 1BedchairFBLLkbC9EgACR7BQv5VGLoHeK

Pattern: 1Licencee

Address: 1LicenceefQikWdmVNoqXsmq4Zm69H75kY

Pattern: 1Parbreak

Address: 1ParbreakDyRWrkAEBoc2biP43QcXNVzPX

Pattern: 1Crevised

Address: 1CrevisedPs6KX3DKYczd9MkDamTkybHd6

What's special about them?

The chance to discover such an 8+ digit human-readable address is near zero. An average gaming computer would need roughly 4 years (!) to find such an address.

They are effectively impossible to replicate and are perfect show-offs.

I am working on discovering more such addresses and will keep this thread updated.

Price per address: 0.005 BTC

Payment method: BTC

Happy buying! ?

Can't you techically get any fund the address will receive with the private keys? Not trying to sales trash this post, I'm just curious.

Hi, I ensure I will immediately remove the private key from my harddrive as soon as it's sold. But technically, this would be possible for a scammer, yes.

Sadly, there's no algorithm that can make private keys unaccessible for me as the creator of the adress but make it available to the buyer. So, I am limited to sending and destroying the key.

Stig - July 22, 2020, 6:24 am

How do you "discover" these?

Sakurro - July 22, 2020, 6:41 am

(Jul 22, 2020 06:24 AM)chattermax Wrote: [\[CITE\]](#) How do you "discover" these?
Hi chattermax,

Bitcoin addresses are generated from a random private key. I try out billions of private keys until I randomly find one that generates a bitcoin address that starts with a human-readable word.
It's a bruteforce algorithm, just like password cracking. Keep guessing until you find something.

In this thread, I sell the private keys you need to become the owner of the listed addresses.

I have added a free rare BTC vanity address for review to the Original Post.

Whoever messages me first, gets it!

Jimmie - July 23, 2020, 2:23 am

Pretty cool addresses I was given a vouch copy and it worked.

Literally he could access to the private key after selling and it is not sure that if he keeps key or destroys them

Sheeple - July 23, 2020, 6:50 am

It's a program called vanity gen. A few threads like these pop up every once in a while. It's not advisable to buy this service from someone else since he can keep your private key and access your BTC wallet at any time he wants. It doesn't take long to get a BTC address you like using the

program. It's free you can find it in GitHub.

Seems very interesting. (I know how to make these addresses by myself though so I don't need).

If you manage to secure that you'll somehow 100% delete the private keys from your drive would be really awesome. But technically it's close to impossible to do that as there are tons of ways to restore these keys. If you make it though you'll make good profit by selling that kind of addresses.

Not trying to trash your thread, just my opinion. GLWS ! :)

Vitaly - July 24, 2020, 5:33 am

You can literally make these yourself, I hope no one pays for this when someone else would have your private keys

Sakurro - July 24, 2020, 8:55 am

Yes, if anyone here knows a reliable way to prove that something is deleted to a customer, this would be really helpful to me.

Aside from that, thanks for your feedback.

NOTE: I have just added two new addresses which are now available:

Pattern: 1Parbreak

Address: 1ParbreakDyRWrKAEBoc2biP43QcXNVzPX

Pattern: 1Crevised

Address: 1CrevisedPs6KX3DKYczd9MkDamTkybHd6

Sadly it's impossible even if you remove them from a drive you could easily take a picture from a phone or even a screenshot before you do it.

J?son - July 30, 2020, 4:04 pm

I currently access a few servers with 32 cores and 376GB ram and I could generate these in 0.2

seconds

let me know if anyone wants one FO FREEEEE
