Thread: [How to insert Distinct Records OR Avoid repetition when insering values into DB](#)

blackcoder00 - July 22, 2020, 4:53 pm

i have some trouble when i insert values into database the record repeats himself how can i avoid this problem guys

and thank alot

ps:i spend one week thinking and searching how to avoid this trouble without result

PHP Code

```
<?php
$sql="SELECT name FROM ingredient";
$result=mysqli_query($conn,$sql);
/* if (!$result) {
    printf("Error: %s\n", mysqli_error($conn));
    exit();
}*/
echo"<select name='cars[]' id='cars' multiple >";

while($row=mysqli_fetch_assoc($result))
{
    foreach ($row as $key => $okhrej) {

        echo"<option value=".$okhrej.">".$okhrej."</option>";

    }

}

echo"</select>";
```

```
$sql1="SELECT name FROM ingredient";
$result1=mysqli_query($conn,$sql1);
while($row1=mysqli_fetch_assoc($result1))
{
    foreach ($row1 as $key1 => $okhrej1) {

        echo "<input name='ingsave[]' >";

    }

}

mysqli_close($conn);
```

PHP Code

```

<?php
$selectop = $_POST['cars'];
$name = $_POST['nom'];
$prix = $_POST['prix'];
$prixn = $_POST['prix-neut'];
$savesplease = $_POST['ingsave'];
if(!empty($_POST['cars'])){
foreach ($selectop as $key ) {
    foreach ($savesplease as $key1 ) {
        mysqli_query($conn,"INSERT INTO coffe VALUES ('$key','$name','$prix','$prixn','$key1')");
    }
}

echo "New record created successfully";
}
else {
    echo "_error_: " . $sql . "<br>" . mysqli_error($conn);
}

```

google works nice

<https://www.tutorialspoint.com/mysql/mysql-handling-duplicates.htm>

try it

Why is your insert query in 2 loops? Post the full code, it's hard to tell what's even happening here.

HFDone - July 23, 2020, 6:05 am

delete foreach http://www.w3schools.com/php/php_mysql_select.asp

thank you bro but i solved the problem from the last night

the correct code

PHP Code

```
<?php
if(!empty($_POST['cars'])){
$stmt = mysqli_prepare($conn,'INSERT INTO coffe VALUES(?, ?, ?, ?, ?)');
mysqli_stmt_bind_param($stmt, 'ssiii', $v, $_POST['nom'], $_POST['prix'], $_POST['prix-neut'],
$save);
foreach ($_POST['cars'] as $k => $v) {
    $save = $_POST['ingsave'][$k];
    mysqli_stmt_execute($stmt);
}

echo "New record created successfully";
}
else {
    echo "_error_: " . $sql . "<br>" . mysqli_error($conn);
}
```

yeah that's why i got that problem (insert the record 4*2) because i have put it into two foreach loop
