Thread: [\[HTML HELP\] Adding a link to a button](#)

Mind - July 23, 2020, 11:21 pm

How do I add a link to this button?

```
<button type="submit" class="submit button-primary">Your Text Here</button>
```

Thanks.

Kant Atta - July 23, 2020, 11:21 pm

```
<a href="#"><button type="submit" class="submit button-primary">Download Adobe Photoshop CC 2019</button></a>
```

Xora - July 23, 2020, 11:23 pm

Bro search online, it takes like 1 second

Got this from cuckoverflow

```
Code <form action="https://google.com">
  <input type="submit" value="Go to Google" />
</form>
```

If you prefer using JavaScript:

```
Code const btn = document.getElementById("myBtn");
```

```
btn.addEventListener('click', () => {
  window.open("http://whatever.com");
});
```

Here's a live example that should demonstrate it for you:

<https://jsfiddle.net/9zszybge/>

You are misusing the functionality of a HTML Form to perform a simple redirect. The primary functionality of a HTML Form is not to redirect but to submit data. Hence the input type "submit".

Using this, you would submit data to google.com which is potentially dangerous if you have any other form elements in your form.

I would recommend you to not use this method to perform a redirect if you value the privacy of your users and more importantly: this should only be used when submitting data to, for example, a backend API system.

Instead, one should opt for other solutions posted here, like for example the one posted below.

Deal - July 25, 2020, 9:15 am

Honestly I use to just create a regular link, and then style it myself.

Example:

HTML:

```
Code <div class="button">  
  <a href="example.html" class="btn">Example</a>  
</div>
```

CSS:

```
Code .btn {  
  font-family: 'Open Sans', sans-serif;  
  border: 2px solid #374C6F;  
  padding: 10px 40px 10px 40px;  
  font-size: 14px;  
  font-weight: 600;  
  text-decoration: none;  
  color: white;  
  background-color: #374C6F;  
}
```

```
.button {  
  padding: 50px 0 0 0;  
}
```

There are rumors that this approach is best SEO wise too.

But again nothing that I personally have confirmed, I just find it more convenient to do my buttons like this.

Code <form action="https://google.com">

<input type="submit" value="Go to Google" />

</form>My dog, why would you use a form to create a link? I bet you also use tables to structure your website.

Glad you got clapped, this was a retarded post for you to have made.
