Thread: [\[GIVEAWAY\] FACEBOOK - 20,000 members from any Facebook Group](#)

SIM-3218151 - July 27, 2020, 9:48 am

Hey guys, someone contacted me to build software that could extract over 10,000 members from a Facebook Group, he had the idea that it wasn't possible. Turns out it was, but he was a bit of a low balling dick (he wanted to pay me \$5 after hours of work, if I could strangle someone over the internet...) so I said screw him and kept the program on ice. Figured I might as well do a freebie, test the program out, as well as any interest for this as a service.

Give me the link to a group whose members you want extracted, and I'll give you the Name and Profile Link of up to 20,000 people in the group in a .xlsx file. If you want more info, just ask and I'll see if it's possible. If I need to be a member, it might be tricky, but worse comes to worse, you can just give me an account that is a member to run the software. High quality members to the front of the queue.

Example Output:

DaChosenOne - July 27, 2020, 3:20 pm

What info can you extract?

I can let you test it on my group 2.8k members and I'll invite you in.

I need emails/ phone numbers.

Extract as much info as possible.

Will send you a PM.

Emails would be interesting for marketing purposes, having just names and profile links are not that interesting honestly.

Yeah, more for people in FB marketing I guess, will probs make a linkedin/craigslist scraper for emails/phone numbers then.

Facebook targetting is pretty difficult. Most messages end up in a message folder that is often unread because it is for people that the clients don't have normally speak to so it's pretty much categorized in their spam folder. Good luck if you know what to do with these however!
