Thread: [Networking graph control.](#)

SIM-4100260 - July 30, 2020, 7:46 am

So, back in the days, a former friend showed me the NanoCore Remote Access Tool, and i became obsessed with the networking graph(the thing from the top, with the moving bars). I tried recreating it, to no success(as i do not have gdi knowledge). Reversing the code is out of the question because, even after cleaning it up, it's preety bad.

Can anybody help me?

Netw?rk - July 30, 2020, 2:47 pm

I've done something similar back in the days.

[Advanced VPN Client // 1 COPY ONLY // Many Features // TCP/UDP](#)

I can do something for you, lmk.

I can do something for you, lmk.

Thank you, but it is not what i am looking for.

I have successfully decompiled both tab controls, buttons, and some other misc controls, and cleaned them enough so they work (from the oldest version of NanoCore i could find, because it's graph is better.) The graph still eludes me.

I am doing this just so i can learn how to make controls. Then, i can make my own little controls.

If you are referring to the controls, you can't. They were extremely obfuscated (as you'd expect) (multiple times - by Aeon, the reposters, the crackers, the backdoorers; everybody unpacked and re-obfuscated). Even unpacked, there are useless methods calling other useless methods, and i am working on reducing those. I even got the logo, but it is incomplete. I can give you the

code, but is is ugly.

I am planning to start learning GDI. All for an aesthetic control!

[rant]Spoiler ([Click to View](#))

But that comes after i finally make SOME WORKING NETWORKING CODE!

Frightening, frightening is networking, i tell ya all! It's the monster in my dreams. I even got freaking HD full rez videos playing in realtime in the damn CMD, and i can't send an image over the network without it being corrupted :([Help on that would be more even more useful than that dumb control, and i know about the networking libraries and classes out there, but i just can't accept using something i don't understand]
