Edit : using Netwire official version seems good with the runtime of AV like avast avg kapersky ect..
but WD still detect it

Also the Startup doesn't work with Netwire

Please note, you asked for no icon so that's most likely it. Once you add your icon that will most likely change.

Also i urge everyone not to scan it as it will just kill the Fud time.

Any type of scanning is not allowed and will jeopardize the FUD of the file. I personally don't trust any type of scanning, many times it will ruin the crypt.

You are right, some scanner are distributing, but Dyncheck is safe unless you use the internet connection.

I would say its one of the better checking services yes, but most russian crypters from another site we cannot talk about. Don't even scan.

Also I want to let it be known that if you are using public malware, it will be detected more. Nothing I can do about it.

EDIT:

Nice crypt service.. by cassandra.pw lol

DNSPY: FILE CASSANDRA/THIS GUY.

cdn.discordapp.com/attachments/737786114324299827/739618122130128896/unknown.png

same structure, and the module which cassandra uses is the same, lol

0/10.

Longdog - August 2, 2020, 5:08 pm

Update: Have removed .net crypt due to my source for .net not being reliable / most likely using another HF members product. For native, I am building them by scratch so no problems there. I will no longer be offering those .net crypts.

darkaoui95 - August 3, 2020, 2:53 am

LOOOOOL this guys the hell ?

befocuz - February 5, 2022, 10:34 am

Do you still provide this services?
