Thread: [server side programming](#)

greasyAlessandra - July 31, 2020, 10:44 pm

which framework do i learn for server side programming in python?

SIM-4793046 - August 1, 2020, 3:51 am

front end or backend?

Django or flask is best for creating front end.

yes for creating a webpage.
also, you can search on google "how to create a python website from scratch/guide"

Django or flask is best for creating front end.
You mean backend. Frontend is what the user sees and can sometimes interact with. HTML - CSS
- Javascript are all frontend

Easiest to learn right now is Flask so you could give that a try. But there are many such as Django,
FastApi, Pyramid, etc..

thank you. i will read about all.

Dexie - August 17, 2020, 10:34 pm

Thread isn't the newest, but I'd say use Django over Flask.

vorticalbox - August 18, 2020, 2:04 am

I have been using [FastAPI](#) for personal projects really nice.

You shouldn't learn both as it will take extremely long time.

Use `Flask` if the project is on a small scale

Use `Django` for bigger/enterprise solutions

Also to become a full stack engineer I suggest using js `React` framework for frontend and learning REST API or other similar querying language.
