Thread: [\[GUIDE\] Gain admin rights on your schools network](#)

alx187 - August 1, 2020, 6:35 pm

?How to become administrator on your schools network?

Before starting off you will require a few things to make sure everything works smoothly.

FUD keylogger(not password stealer, do not confuse the 2)

PE(.exe) binder

You can either code a TCP echo server and have it listen for your key logger or you can save the data locally.

Knowledge in a programming language wich can be compiled to a PE(I recommend making the keylogger in that language as it will be easier to use the binder)

A copy of the browser ised at your school.

Make sure to get everything ready at home to avoid getting caught

1. Code your key logger :Make sure the logger can not be seen as a terminal or as a suspicious proccess in Task Manager.

Before UAC is prompted, spawn a message box with an error detailing why UAC is needed(optional but will make it more legit).

The error can be stuff like invalid files, cache errors, datetime errors(pretty suspicious) get creative and make sure it looks legit

Start your key logger

Require UAC

Throw an error and kill the PID if UAC is not granted

2. Bind your logger to your schools web browser:Open your PE binder of choice.

Bind the key logger to your schols web browser.

Test detection using a no share virus scanner(Its best if you know wich AV your school uses so you can make sure its FUD for that AV).

(If it is not FUD I do not recommend proceeding as it may lead to you getting caught and suspended))

3. Put the files on a USB stick and carry it with you to school the next day.
(It would be good if your school has a place for students to use the PCs in the break, since most schools make a folder for each student it would allow you to replace the web browser without your teacher being around)
4. Run the newly created browser and wait for the error to pop up.
5. Call your teacher and ask her/him for help, say you tried to close it but it keeps coming up etc
6. If you are lucky enough, your teacher will enter his/her admin login details and your logger will grab them.
(Not all teachers are admins so take that into consideration)

This is just a concept, I do not recommend trying this as it may get you in trouble. I am not responsible for any damage you cause to your/the schools PC.
You can try this on your own risk.
