Thread: [Looking for a private Team Fortress 2 Legit Cheat / Dev](#)

nyehboy - August 3, 2020, 12:02 pm

Don't waste my time or yours if you are trying to scam me because I won't be scammed.
Looking for a private cheat or dev who can make a small undetected cheat for Team Fortress 2.
I want to seem as legit as possible while still having these features.

Requirements:

Triggerbot (auto-detonate stickybombs)
ESP (Health + Player + buildings)
Customizable ESP to only show within a specified range.
ESP visibility check (do not show invisible spies)
ESP customizable colors for each player on enemy team.
Customizable config setups with customizable binds to change configs while in game.
Stream-Proof using OBS or xsplit

Optional/If possible:

Draw predictions for projectile weapons (show where to shoot projectiles using time and gravity prediction)

Smooth Aim for Projectile Weapons (Low FOV)
Smooth Acceleration for Projectile Weapons (Low FOV)

Can pay using paypal/bitcoin/cashapp.

Pricing will be discussed after contact.

Currently using private version of LMAOBOX but looking to switch because of potential banwaves.
