Thread: [Whatsapp Marketing/Blaster Service](#)

Proxies.tv - August 3, 2020, 5:57 pm

For serious marketers that want to specifically target their marketing activities to very specific area codes, cities, states, and countries, we present you the opportunity to reach millions of active Whatsapp users across the globe.

Whatsapp marketing, being very specific as it is, has been proven to be far more effective than email marketing. With a near instant reachability to your target consumers, you can rest assured that your message will be seen by your audience no matter where they are, no matter the time of day, and no matter the geographical location.

Your Benefits:

- 1.) A professional and effective platform to communicate with potential customers or create a loyalty program.
- 2.) Your bulk whatsapp messages along with images or videos and 4,000 characters.
- 3.) A video or picture is worth than thousand words. Enrich your bulk whatsapp messages attaching a photo, video or vcards.
- 4.) Enjoy bulk whatsapp service via WhatsApp media with more than 4,000 characters per message. Which is more than enough to communicate effectively , and with the possibility to attach images, vcards or videos.

Our pricing is based on the factor of \$0.02 USD per message and this is a flat fee regardless of the country or locale that your messages are being sent to. This is the lowest price on the market at this time.

This service entitles the buyer to have their text, picture(s), pdf files, or whatever else they want sent to bulk Whatsapp users in their chosen locale, city, state, country, area code, and/or specific wireless carriers.

What you will need to provide:

- 1.) Your list of phone numbers (preferably pre-filtered), but if not we will filter them prior to your campaign
- 2.) Your text message ads (include any spintax as well)
- 3.) Your folder of images (if you are sending pictures)

If you do not have telephone numbers at all, this is not an issue. We can provide you with options in the U.S. and Canada. For other countries you will need to provide at least the country code and valid prefixes.

Personally I could care less what your marketing, therefore I don't sensor the material.

Costs:

10,000 Messages: \$200 USD
25,000 Messages: \$500 USD
50,000 Messages: \$1,000 USD

100,000 Messages: \$2,000 USD
250,000 Messages: \$5,000 USD
500,000 Messages: \$10,000 USD
1,000,000 Messages: \$20,000 USD

Orders at half a million and above are split between 2 days for delivery. Everything below half a million are delivered within 24 hours. Before you complain about pricing, check the prices over at Twilio first. You will see they are much higher. Competing services charge more if you are sending pictures and pdf files. I don't charge anything extra for those. Competing services also incorporate moral and ethical clauses. I do not. I just carry your message without involving politics, personal views, or anything.

Campaigns are best sent to your target audience after midnight in their local time zone. We hit way less spam filters when people are asleep, therefore we get more from each phone number. So factor this in when preparing your campaign. So if you've got something the world is just dying to buy from you, Whatsapp marketing is by far the easiest way to reach them.

Thank you. This is pretty much the easiest way to make video go viral or sell just about anything under the sun. Thats why I went in this direction. :)

Proxies.tv - August 5, 2020, 9:27 am

For those that have asked me for phone number sources via private message, I have sent you a solution. However to make it easier for everyone else considering this method as an advertising solution here is a great source for U.S., Canadian, and U.S. Virgin Islands phone numbers and their wireless carriers:

Code <https://www.allareacodes.com/313>

Area code 313 in this example is for Detroit, Michigan. But this site covers all areas codes in the U.S., Canada, and Virgin Islands. The part of the site that you are looking for is at the bottom of the page and specifically what you are looking for is this:

As you can see, we have the ability to see which prefixes belong to which carrier. In the case of hunting down cell phones that have whatsapp installed, we look to the prefixes nominated to wireless carriers. Each prefix carries 10,000 possible phone numbers. Now all we do is scan those 10,000 phone numbers with our whatsapp scanner and in a few minutes it tells us how many phones are active and which have whatsapp running.

Now all we need to do is set our message and let it rip.

So this can be very specifically geo-targeted to whatever city, state, and wireless carrier you desire. This method is laser targeted to your specific location. And a thousand times more effective than any other method of marketing. As there are no spam filters for incoming whatsapp messages, your targets are sure to read your message. Now this isn't to say they will act on your message, but they are guaranteed to read it simply out of natural curiosity. So if you have a very effective message, expect results.

This is GREAT!!

Can you please post here what one of the ads looks like??

Proxies.tv - August 6, 2020, 4:04 pm

The ad is your content. You write it and I send it.

salesguy77 - August 6, 2020, 4:05 pm

Just wanted to see a sample no big deal

Proxies.tv - August 6, 2020, 4:19 pm

If you are advertising a brick and mortar business, you can use the format above with a map pin-pointing the name of the restaurant and its address. In the second example you can send voice messages. There are so many other ways to send and write ads based on whatever it is you are specifically marketing. Your mind is the only limit here.

This is also the easiest way to make youtube videos go viral. A catchy title and a cool video will have many more people forwarding your ad (video) to their friends and associates. If your content is good enough, more people will forward your material to their friends, family and associates.

This is the phone number filter. As I'm currently running ads in Indonesia, I completed a scan of 50,000 mobile numbers in around 1 minute. So out of this range of 50,000 phone numbers, 5,444 cellular numbers had whatsapp installed and running. Now we load that into our blaster, which already has our ads pre-load, and away we go. It takes less 5 minutes to hit all of these 5,444 phones.

salesguy77 - August 23, 2020, 4:49 pm

I REALLY want to use this service but I need large phone list from whatsapp ongoing in bulk for people looking to make money from home I have a good converting deal

Proxies.tv - August 23, 2020, 5:16 pm

I have the number verifier. I can scan through telephone prefixes as far and wide as you want.

Dark_Soldier - August 23, 2020, 5:46 pm

Now, this looks like a great service!

The filter program is a free tool? I would like to be able to filter lists before sending so I know how many have WhatsApp. I am thinking of scraping business numbers in bulk. what's the min-max order as well?

Proxies.tv - August 23, 2020, 6:48 pm

The filter tool costs \$175. Plus you need channels to run it. There is no minimum order to filter numbers. But because channels cost to produce, I'll scan each list of 100 phone numbers for \$1.
