Been playing PrimeDice since July 20 with an initial bank roll of ~\$2k eth/BTC. As of today, I'm sitting on \$25k :)

That's impressive but don't look at gambling as a way of making money, and don't get greedy like me.

I also made so much money from bustabit and was looking at it as a way of making extra money, until I started losing ... I would lose it all; then end up putting more money in thinking I could have the luck I had before, sometimes I would go from 100 euros to 1k, and lose it all again.

So if I were you, I'd probably cash out 10k leave the rest which would still be a good amount and if you lose, at least you cashed out 8k profit.

Now take them out and never gamble that much again, take the win and say thanks to faith. That will probably never happen again, house always wins in the long term

Silkroad - August 6, 2020, 8:34 am

That's really impressive but like the two above me said, cash out asap, the house always wins on the long run.

Good job mate on winning that sum! Don't get greedy though. Make sure you withdraw most of the funds.

When you win in primedice, you will always want to win more and that would never happen if you don't stop. You need to stop being greedy or you will end up losing in the long run. This is proven many times based on my own experience.

Wow that is amazing dude. I never win big in dice bet but I am addicted to bet everyday, trying new strategies.

What did you do with the money?

blkchain - September 18, 2020, 2:55 am

nice mate! take your money and RUUUUUN.. haha. Casino will get it back if you're not careful. Curious though, are you running 1 autobet strategy? or are you manually changing things up a lot. would like to see what you're doing. Anyway, congrats

Withdraw everything before it's too late.

Just a personal advice from an ex high roller.
