Thread: [\[SEMI-AUTOPILOT\] MAKE \\$50 PER DAY EASILY 100% WHITEHAT METHOD](#)

DigiProfits - August 6, 2020, 1:13 am

Learn how to make \$50 per day semi-autopilot

Very easy step-by-step method, no surveys or reselling.

Quote: This method is called arbitrage betting, aka "Arbing/Arb Bets". An arbitrage bet is where

we bet on both outcomes of a bet on different sites that have different opinions of an outcome of a match. This guarantees a profit of 1-10% on every bet. Arbitrage is a no risk type of bet because you will always profit regardless of how the outcome that the match has.

For the last month, the total possible profit from November 1st to November 30th and was 28.08%. If you bet on every opportunity available, the profits are as follows:

\$50 Investment = \$64.04

\$100 Investment = \$128.08

\$200 Investment = \$256.16

\$500 Investment = \$640.40

\$1000 Investment = \$1280.80

Etc.

Placing Bets

1. Here is a list of possible betting websites:

-Sportsbet

-Cloudbet

-Nitrogen

-BetBTC

-mBet

-OneHash

-1xbit

-Bitcoin

-Bitcoinrush

-Fortunejack

-Anonibet

You will need to create an account for any one of these. The more accounts you have, the more bets you are able to place.

2. Head over to <https://twitter.com/bitedgecom> - This is where we can get bets from easily. Here is an example of a bet: <https://prnt.sc/tr2ket>

For the first bet, you will bet 56.4% of your investment on Sportsbet on Juventus for -1 handicap. For example, if you are investing \$100 total, you will be investing 56.4% of that here. Which equals \$56.40

For the second bet, you will bet 45.4% of your investment on Cloudbet on Sampdoria for +1 handicap. For example, if you are investing \$100 total, you will be investing 45.4% of that here. Which equals \$45.40

The average profit will be 1.8%. This shows that you will profit regardless of the outcome of this game.

Don't forget to follow the twitter account and enable notifications so that when a bet pops up, you are able to immediately bet. As you saw in my calculations, if you bet on every possible outcome, bet the investment + the profit from the previous bets, you will

see your BTC balance rise by 20-40% each month no problem.

I'm not a gambler nor I gamble but I think I do know what handicap is.

If you bet on Juventus handicap -1 that means in order for your bet to win, Juventus needs to win by 2 goal difference, correct? So results like 2:0, 3:1 etc.

If you bet on Sampdoria +1, in order for your bet to be won, result needs to be either a tie (0:0,1:1,2:2 etc) or Sampdoria win by any results.

Now my question is, how is it a win if outcomes are the following :

Juv-Sam / 1:0

Juv-Sam / 2:1

Juv-Sam / 3:2

Neither handicaps win in those scenarios so you effectively lose both bets. Or am I missing something?

Hey, I'm not a gambler too, I wrote the method few months to advertise something on my blog, but it looks like you are right.

If you are interested in arb betting, you can maybe read this article (not by me)
<https://bitedge.com/sports-betting-guide/arbitrage-betting-trading-and-hedging/>

I've read it and it genuinely makes no sense, I know what arbitrage is but this is just stupid imho. Basically this relies on scavenging betting sites for 2% profit. You might as well go full retard and bet on one outcome only... Just saying.
