Thread: [The future of mobile devices](#)

Mariowilsonup - August 7, 2020, 1:19 pm

Hi everybody

what do you think what the future of mobile devices in the next 5, 10, 20 and 30 years will look like?
It's very exciting what your thoughts about the future are.

MavenGradle - August 7, 2020, 1:22 pm

Hopefully it'll look like a contact lens, With augmented reality added.

Wouldn't it be great to see people wave their hands around all day in the middle of the street to catch virtual pokemons?

jecoylecay - August 13, 2020, 9:42 pm

maybe a hologram attached in the wrist. :D

Semmenial - August 13, 2020, 11:33 pm

I can see mobile phones integrate into glasses to be honest.

Currently they are all becoming more sleek and powerful ever year, so I guess we'd have to sit back and watch

Mariowilsonup - September 1, 2020, 3:57 pm

Do you think contact lenses will be used? Because contact lenses have uncomfortable feelings on your eyes, haven't they?

Do you think glasses will be used? Because glasses due to the temple stem have uncomfortable feelings on your ears if you wear them for hours, haven't they?

Maybe hologram from your wrist watch? I guess the demand for smart wrist watches will boost in the next years.

Killercat - September 17, 2020, 9:17 pm

The most immediate future I see is to incorporate them into lenses. This would be very practical to keep your hands busy and also if you want to browse the internet or analyze information in a more comfortable way.

I have also come to think that maybe the functions of today's phones are embedded in brain chips or something like that, although honestly that bothers me a bit.

pimpim - September 19, 2020, 1:56 pm

Mobile phone will be a history. There will be something more sophisticated like chips inside our brain.

ant1kan - September 28, 2020, 11:33 pm

This is quite a big range. 5 to 30 years!

However, if we talk about 30 years from now, I think the "chips inside our brain." idea is very

plausible.

Industry experts predict that in the coming year's mobile phones will become remote controls of our lives. Phone companies have talked of creating a smartphone that is so robust, that it can be folded in two.

junnar1968 - September 29, 2020, 12:53 pm

Don't think about it right now, there will be a lot of changes every decades example.

In year 1960 and 1980 they've been thinking if in 2020 we already have flying cars.

But look at us now. humans are making tiktoks and memes and addicted to Among Us.

Good luck on our future.

pipito - September 29, 2020, 2:23 pm

I think phones as we know them will be replaced by much smaller or more sophisticated devices, like chips or eyeglasses. I think the chip thing is more likely. I imagine that you will be able to consult any type of information on the web just by thinking about it.

FrostyNugs - September 30, 2020, 10:05 am

With how things are going the VR scene is talking over I think next will be like a hologram type thing that comes out of your watch. Some future movies get most of the stuff right and there are holograms in almost every future movie so who knows maybe next we go holo.

Mariowilsonup - November 8, 2020, 2:16 pm

Do you think in the next 5 years until 2025 there will be a new big thing in mobile devices which will be used by the masses? If yes what will be the next big thing in mobile devices which will be used by the masses?

Mariowilsonup - January 23, 2021, 1:01 pm

What do you think what innovations regarding mobile devices and also computers will happen this year?

Mariowilsonup - March 6, 2021, 12:33 pm

I would look forward to reading your thoughts about it. What will be the most innovative things launching this year with regard to mobile devices?

Alt.tycho22.5 - April 19, 2021, 6:56 pm

A rollable/foldable display with a battery and antenna, nothing more. Speeds of 5g and next Gen have sch low latency that everything, at least on a consumer level, will be cloud based. Even your OS/dashboard. This applies to AR glasses and all the like.

Larry - May 2, 2021, 8:42 pm

They will replace laptops and desktops
