Thread: [Someone wants to be in a hacking team with me?](#)

nimda228 - August 7, 2020, 5:49 pm

Hi, I am trying to hack a WordPress site. The website has limited login attempts. But fortunately xmlrpc.php file is enabled. I can use it to send multiple passwords in only one request. This way we can bypass limited login attempts. But the problem is that I have to first craft the link with multiple passwords. I am finding someone who has enough experience with WordPress hacking and programming. Reply if you think, you can be with me.

Why don't you try to hack any shared server website then by symlink you can get access on your target

how do you trust to people in here
they might be from Gov. agencies ??
i think you wanna get caught
ok ok Good Luck
have a nice flight

Use <https://medium.com/@the.bilal.rizwan/wordpress-xmlrpc-php-common-vulnerabilites-how-to-exploit-t hem-d8d3c8600b32> to work out if it's vuln.

Then use something like <https://github.com/aress31/xmlrpc-bruteforcer> to bruteforce it??
If ya want to be stealth, make sure you don't be too aggressive. I work for a webhosting company and I've seen attacks like these bring servers down or set monitoring software off (Like nagios) alerting us to the attack.

Like cyberdog said too, use something like <https://hackertarget.com/reverse-ip-lookup/> just incase there's something easier to hack on the same server.

how many thousand words do you have to bruteforce. ?
