Thread: [Combine Vendor Profile Page with Market Profile Page for Vendors Only](#)

Nas - August 8, 2020, 9:15 pm

As the title says, the Vendor profile page is not really shown anywhere or rarely used as the market profile is more vital.

My suggestion is to combine the Vendor profile page assets and put them in the marketplace profile pages for Vendors.

Vendor profile Page: <https://hackforums.net/marketcp.php?action=vendor&uid=1>

Marketplace profile page: <https://hackforums.net/marketcp.php?action=profile&uid=1>

Such as:

and

No. The Vendor page still gets active development. It's very different than your profile page.

But if a user is a vendor the marketplace page would adjust to show a modified vendor version of it. It just seems way more sense then having three different sets of a "profile" page. Vendor page is different but if a user is a vendor maybe their marketplace profile is adjusted with more vendor assets.

You aren't quite understanding the purpose behind Vendor page and maybe after more development to it you will. It's not suppose to be just a Market page. It's a Vendor perk. Their page to fancy up and do what they wish with. Better suggestions would be improvements to the page itself; let's hear them.
