Thread: [Valid JSON \(jsonlint\) couldn't be Deserialize](#)

HardStoN - August 12, 2020, 7:20 am

So im trying to Deserialize json string which is valid (checked by jsonlint) but somehow this code:
Code `dynamic data = JsonConvert.DeserializeObject<dynamic>(txtRes.Text);` works but when i try to get and element like
Code `data.skuModule` i get an error
Quote: `Microsoft.CSharp.RuntimeBinder.RuntimeBinderException: 'string' does not contain a definition for 'skuModule'`

plus i used

Code `JsonConvert.ToString(txtRes.Text);` function to escape all the needed chars

the json string is shown by a rich text box and it is:

<https://pastebin.com/VzM01szD>

HFDone - August 12, 2020, 10:32 am

which library you using
try `data["skuModule"]`

HardStoN - August 12, 2020, 10:37 am

this is what im getting

Code `Microsoft.CSharp.RuntimeBinder.RuntimeBinderException: 'The best overloaded method match for 'string.this[int]' has some invalid arguments'`
and im using using `Newtonsoft.Json`;

try `data["skuModule"]`

Answer to you

HFDone - August 12, 2020, 11:28 am

try this `data[0].skuModule`
0 is the json array you want
check doc <https://www.newtonsoft.com/json>

HardStoN - August 12, 2020, 11:37 am

0 is the json array you want
check doc <https://www.newtonsoft.com/json>

Getting this error Code `Microsoft.CSharp.RuntimeBinder.RuntimeBinderException: 'char' does not contain a definition for 'skuModule'`

god dammit maybe there is something wrong with my json string although the JSONLint says its ok

Quick update guys apparently my json was fucked.... it had , at the end and a missing { at the start but never mind boys thanks for the help

So, has this been resolved?
