Thread: [How to trace IP addresses or websites to a location.](#)

**Elue** - August 13, 2020, 1:30 pm

Hello,

In this tutorial i will show you how to get the IP address of a website and how to trace it to it's original location. Just to say, this location is not really exact. It wont give you a specific adress. But it's still a pretty cool thing.

The first thing you want to do is open Command Prompt, every PC has this. Just press the windows button and type "cmd" in the search bar.

Once you opened it, you want to type this: "tracert Websites name."

So for example : tracert [www.youtube.com](http://www.youtube.com)

Just wait untill that has loaded and use the LAST Ip that it shows.

Then you want to go to this website: [http://www.ip-adress.com/ip\\_tracer/](http://www.ip-adress.com/ip_tracer/) OR <http://cqccounter.com/whois/>

Enter the IP in the search bar and press enter. This should give you a location.

And your done. As i said this is really nooby and simple but .. i tried.

It is very simple indeed, but of course you're helping new hackers with this!

**anonymous\_290** - October 13, 2024, 5:40 am

its pretty nice to know even little tricks

nice ++++++

**backdoorsiyam111** - October 13, 2024, 12:43 pm

bro please video help me ima student

**zeeshake** - October 18, 2024, 3:31 pm

Appreciate this for the beginners. Wicked stuff mate.

**whenzy** - October 19, 2024, 7:58 am

Thank man. i followed it and its work.

**ManicBB** - October 23, 2024, 12:44 pm

Wow, learn something new everyday °(o\_o)°

**03jk** - October 23, 2024, 7:02 pm

Yo man this is easy thanks

**Pimping** - October 23, 2024, 7:10 pm

Simple tutorial that everyone should know  
might help people
