Thread: [Hack an Iphone with an Iphone](#)

aderian - August 14, 2020, 3:44 pm

Dear Everyone on HF

I am wondering if it's even possible to hack (by hack I mean gaining access to your iphone without knowing the passcode) an iphone under these conditions:

- 1) No cables attached
- 2) You have access to that iphone physically
- 3) Without using a computer

I have been really confusing about what my friend did another day, he stick his iphone on the back of my iphone, and a few seconds later he got my passcode, is that even possible?

He told me that at the back of your iphone theres a chip and that chip is particularly vulnerable that he can use it as a window to get in.

Please guide me...Thank you so much!

There's no way of breaking Apple's security that easy.

One of the most frequent techniques some ppl use in breaking your password relies on the traces of your greasy fingertips. If you look closely at your phone in the sun, you can see the place where the user touched his phone by looking at the glass glare.

Not posebel thuis i think

pinguoin - November 15, 2024, 10:16 am

well... the actual protocol that sharing contact by that kind of NFC is a point to start on what you're looking for.
