Thread: [BUG - YOUR POSTS under Settings Gear](#)

I just wanted to bring it to your kind notice.
I'm not sure whether it's a bug or not.

Suppose you click the "Settings" icon in a thread and then click "Your Posts" (Assuming you posted something). Your post shows up, but it lacks a few things like Awards, B-Rating, and Game XP.

Spoiler ([Click to View](#))

I've been experiencing this issue and thought it should come to notice.

Why didn't you just PM him about it?

Why does it matter, op has made the thread in a decent section where atleast one member of staff will see it. Do you have any clue how many PM's staff get daily.

I just thought if it's a Bug, it should be fixed. I'm just trying to help the community. ?

Yes, but there is only one person that will fix it.

I think I know why it happens. Should be an easy fix. I will have [Xerotic](#) take a peek at this Monday.

We can't reproduce this. Working just fine for us.

[Omniscient](#) I tried and looks like I'm also getting the same error/display.

I can also reproduce this. Attached a gif showing it

Yeah. We figured it out. Working on a fix now. As Admins our permissions allowed it to work. Should be taken care of shortly.

Now it works without any problems!

That was a fast fix

Thanks for the prompt action [Omniscient](#) and [Xerotic](#)

Closing the thread now. :)
