Thread: [Unofficial HF hash cracking group!](#)

Mr. Robot - August 21, 2020, 6:37 am

This is pretty basic.

We will be looking at <https://hashes.com/> for high priced hashes using time-consuming encryption.

I will split my dictionary into multiple pieces depending on how many people are in the group/participating. Right now, to run this dictionary it would take 6-7 days (1080ti) on a list of "Django (PBKDF2-SHA256)"

If we have 7 people, that goes down to 1 day.

If we have 14 people, that goes down to 12 hours.

If we have 28 people, that goes down to 6 hours.

An example of what we will be doing.

There is one currently we will use for demonstration:

<https://hashes.com/en/escrow/item/?id=4623>

18 Hashes available to crack. They will pay \$120.714 USD each for the first 10.

I will supply the dictionary and rules required for other hashes that require them.

The person who has the computer that finds the hash will be rewarded with 50% of the bounty. The rest (50%) will be split among the rest as long as they can provide a screenshot of their hashcat terminal when their list is done or the hash is found. (Which will show how many attempts and hours they put in)

If you would like to participate - post below. If you have any questions, ask them below as well.

Minimum requirements:

1080ti GPU

Up to 30gb free storage space - depending on how many people are in the group.

Basic computer understanding. I can advise/teach the rest of what needs to be done.

(Aug 21, 2020 06:43 AM)Mk-2866 Wrote: [CITE](#) I have a 1080ti and seem to fit the other criteria too so I guess I would be interested in joining if possible. Sounds like a fun challenge

Once we have a set number of people I can split the list into the right amount of pieces and we can get started.

Zero - August 21, 2020, 7:42 am

I have no experience with HASH cracking but I will read some online to understand better. Let me know if that's a problem or not.

I have RTX2070, will that do?

Yup 2070 is fine, it's comparable more or less to a 1080 when it comes to speed.

Basic idea of what you will be doing.

Opening a command prompt on your computer.

Running the hashcat.exe tool via command line like the following:

```
hashcat.exe -m 400 -a 0 -w 3 hashes.txt dictionary.txt
```

Calling the program from CMD

This tells it what type of hash we are running (List of hashtypes and numbers here:

https://hashcat.net/wiki/doku.php?id=example_hashes)

This tells it what attack type we will be running - in this case it's "0" which is "Straight" or just dictionary/wordlist.

"-w 3" tells it the work profile, we can drop that number down to use less resources which will take more time.

This is the file containing what we are trying to 'decode'

This is our dictionary/wordlist containing all the words/combinations to try.

Zeus - August 21, 2020, 8:05 am

Can we have a unofficial king group too bro?

HF Kings, it's coming soon. Official or not.

Mr. Robot - August 21, 2020, 8:06 am

You can have whatever unofficial group you want - I would make it official if we had the funds.

But honestly, if we had the funds to buy a group and then make it for this - with enough people we could easily make a profit for all members.

Well let me know :) Need all hands on deck.

B?????araka - August 21, 2020, 9:13 am

I got a 2070 Super, Would like to help out on this but might need some little guiding.

Mr. Robot - August 21, 2020, 9:29 am

Thank you for the explanation. I'm down to take a part in this. Count me in.

Let me know when you start.

No problem, maybe at like 10 people we can start.

BiggL - August 22, 2020, 6:23 am

Definitely interested, here when you need me bro!

Xen - August 22, 2020, 7:09 am

I have a 1080 and upgrading to a 3080 when they release.

With some guidance I'd be 100% down :D

Awesome! Once we get a few more people we can start.

JaGLY - August 22, 2020, 11:17 am

Hi Mate!

Count me in, currently have a 1080 not sure if that will do!

Thanks for this OP

randomvodkalover - August 25, 2020, 2:57 am

I have Nvidia Geforce 1050 and radeon vega mobile in one laptop can i please join

The Amazing Sinner - August 25, 2020, 3:00 am

Great idea, if I still had my rig I'd help but sadly a laptop is all I got currently.

Goodluck with this, may the best GPU win.

10000days - August 25, 2020, 5:36 am

There really isn't a point in doing this IMO.

As someone who regularly uses hashes.com and hashkiller, there are multiple people who have it botted already. The second a new hash gets posted, there are dozens of people who start cracking it instantly and then auto submit the finds as soon as they are cracked. The process is all fully automated.

Just my 2c.

Mr. Robot - August 25, 2020, 10:06 am

Funny you say that, because that's usually me.

How many are in already?

randomvodkalover - August 28, 2020, 8:52 am

(Aug 25, 2020 10:06 AM)Mr. Robot Wrote: [CITE](#) Funny you say that, because that's usually me. Can you please consider getting me into group? You don't even have to pay me all i want is experience and knowledge

Im High - August 28, 2020, 9:04 am

If you're still looking for people, I'd be interested in taking a look.

I have a 2080 Ti KingPin and the rest of my build matches it pretty well.

Guardians - September 19, 2020, 8:17 pm

This sounds more profitable than mining itself and little down sides. Why has this not become a thing?

Mr. Corleone - September 19, 2020, 8:57 pm

I'd like to participate.

I've got 2 r9 x290's, and and r9 380.

I've also got nand SSD, and 3 normal ones.

Let me know whenever you need help.
