Thread: [Bill Gates says that he wants you to ignore the life-threatening side effects of....](#)

Dragon_One - August 22, 2020, 5:06 pm

Bill Gates says that he wants you to ignore the life-threatening side effects of his coronavirus vaccine.

US states, such as Virginia, say that they will FORCIBLY give the vaccine to EVERYONE!!!!!!

I'm sure other states will too.

The Bill and Melinda Gates foundation has already been accused of medical malpractice and crimes against humanity after his "vaccines" caused sickness and death when they were tested on people in third-world countries.

Hopefully it doesn't come to people being forcibly given the vaccine AT GUNPOINT.

And, if you get sick or die as a result, then TOUGH SHIT!!!

AsSaSs@iN - August 22, 2020, 5:38 pm

The vaccine in Australia will be mandatory (and rightly so IMO). 'Side effects' are things like mild irritation around the injection site, slight fever, malaise etc. I think he reinforced in the video that the majority are not life threatening. Yes, some people will not be able to have the vaccine for one reason or the other (e.g. they're allergic to some of the proteins in the vaccine they use to make it, like egg proteins). Hence why they aim for high vaccination levels to achieve herd immunity and protect those who cannot have the vaccine. Unfortunately, making vaccination mandatory is the push you need to achieve herd immunity, otherwise young people (and others) who don't give a fuck and are just lazy, don't get it done (therefore no herd immunity to protect those who CANT have it).

My point when people question this kind of stuff is;

- If you dropped down having a stroke or heart attack. You would not question the drs/paramedics injecting you and cutting you open to save your life. Yet in a strictly controlled, regulated and evidence based environment like delivering vaccines, you question them.

- You happily use the internet, social media, smart devices etc and enjoy the luxury that scientists and scientific development has afforded you without question, yet when it comes to something like a vaccine developed by the same scientific methods, you question it.

It all boils down to 2 options really;

1. You trust the scientific method that you continue to take for granted and enjoy all the luxuries it has afforded you, ergo you get the vaccine.

- or 2. You choose for this one of instance to ignore and refute the scientific method, all because you don't want someone telling you what to do.

So what is it?

Hint: If you pick 2, you better be willing to give up Wifi, pain medicine, car/plane travel/ electricity and all other other things science has given you. Otherwise you'll be a hypocrite.

If a smartphone is broken, the company will come out with a new one next year to avoid losing money.

If a vaccine is broken, the CDC will study the data for multiple years to confirm there's a problem, then once they're done with you guinea pigs, they'll start the decade-long process of developing a safer alternative.

Material things are a much safer bet than something you inject into your living body... You cannot compare the two. It takes a human lifespan just to see how something affects the human body in the long-run.

If it takes a human lifespan to determine the effects on the body... How about for Paracetamol?

Mobile phones sitting next to your junk?

Increasing man-made radiation exposures in the environment?

All those chemicals you put on your skin on a daily basis?

Thing is, we trust science to make important decisions that influence our life-long health all the time. Why not this one?

EDIT: AT the end of the day, as sad as the reality is. The government wants healthy people for long periods of time. Longer, healthier lives = more money for them from us working. Less burden on the healthcare system etc.

All of those are things that you have control over.

You don't have to take Paracetamol, you don't have to put chemicals on your body, etc.

With a vaccine, it is permanent. You cannot reverse the modifications made to your immune system and DNA.

Because it is permanent, the risk exceeds anything else you can think of. Scientists are not superhuman. Just 70 years ago, smoking was healthy. 150 years ago, handwashing wasn't thought to be important, even before surgery.

Just because you don't know something isn't bad yet, doesn't mean it isn't bad. Good thing we have the right to choose our risks.

SIM-3257834 - August 22, 2020, 7:34 pm

We can use the RGB cat of hf as the first to test it.

Dragon_One - August 22, 2020, 8:23 pm

Bill Gates said that he wants to vaccinate all ~7,600,000,000 people in the world with his unproven and toxic vaccines, possibly by force.

In the U.S.A they already made is required by law. You must get vaccinated and the military is going to make sure of it and force you. you will have to pay for it. You will have to pay bill gate for it.

The vaccine itself isn't permanent. I suggest you research how vaccines actually work.

There's more than 'Bill Gates' working on the vaccine. You should try and not generalise what is happening in the US as what will happen everywhere. Australia is looking at a few different vaccines. Some local and one currently being developed at Cambridge University.

In Australia, if you want to access public services (e.g public schools/childcare) and you have no medical grounds preventing you from being vaccinated, you must be vaccinated to access these services. We also do not have to pay for vaccines, they are covered by the government. This is due to a number of reasons, including that the economic strain of not vaccinating outweighs the cost of (almost, ~95%) universal vaccination. This is the same as many European countries.

Clearly thinking/stigma on these subjects varies significantly by nations. In school rather than practicing what would happen if a mass shooter came into our school, or walking through metal detectors everyday, we'd stroll in our unfenced school and one random day during our whole schooling period we would line up and be vaccinated by nurses for free (after our parents or carers all consented and signed the forms giving permission).

I said U.S.A didn't say it's global. Russia have their own vaccines but the U.S company that is making the vaccines all are bought up by the U.S.A government and will force Americans to take it and they will have to pay for it thru by tax. They will force us wither it works or not. Trust me eventually the U.S.A will bully other countries into using our vaccines. This will eventually be the case.

Perhaps third world countries may be 'bullied'. As for developed nations, well... We have our own labs capable of mass producing vaccines to keep in business. And you're right, the tax dollars will pay for it. It'll be the closest thing the US see's of universal healthcare for it's citizens for a while.

Goods - August 22, 2020, 9:22 pm

Bill Gates isnt making 7.6 billion people do anything. tbh

fudsterman69 - August 22, 2020, 9:26 pm

Yes, but even developed nations the U.S.A is known to tell them use our vaccines or follow our standards or you will be banned from traveling to our country and they might put sanctions on those countries like for trade etc.

Just saying based on history the U.S.A loves to bully others. You may have labs to develop stuff. You don't have global dominated companies that are globally popular to provide a service or a product like a computer or a computer chip. My point the U.S.A is known to twist your arm. I can see them do this for bill gates to make a lot of money off the vaccines he made.

Pawnhub - August 22, 2020, 9:28 pm

I always loved the idea of mandatory vaccines for one reason.

If you get a vaccine, why do I need one? You wont get sick if I catch the virus correct?

For public safety my ass it's all for \$\$.

Since when is giving someone who wants a vaccine vs someone who doesn't want one a risk to public safety.

If your so worried get your self fucking vaccinated!

MarvinMalware - August 22, 2020, 9:40 pm

I don't even know how to feel about this to be quite honest. I have no trust left in the Gates foundation after everything I've read it's just plain old creepy. Personally I will do everything in my power to make sure a vaccine is safe before I allow myself to get it.

I'm all for ending this pandemic and bringing some peace to the world but something about all this just seems flat out weird. He's very obviously avoiding speaking on specifics as far as the side effects go, just doesn't seem to be talking about it in a straightforward manner at all.

While forcing the entire population to do something is absurd, we should keep in mind people believing that COVID doesn't exist and other stuff like this. They would never agree to getting a vaccine, possibly putting in danger the rest of the population.

Want to know a better vaccine?

Put all the immune compromised people at home while the rest go out. Within a few months everyone will have had it and now it will no longer exist.

Solved.
