Thread: [Injecting C# code into unmanaged processes?](#)

District - August 23, 2020, 9:48 pm

Is it possible to inject managed code (C#) into an unmanaged process? If so, what would be the best way to learn how to do this?

I know that you can inject into both process types in C++, but as I'm a beginner in both languages I thought it'd be worthwhile to post here and get some of your opinions.
