Thread: [Base64 decoding](#)

K_I_R_A - August 28, 2020, 12:13 pm

Hello guys,

I was solving some cryptography problems and i found that one
R[corrupted]BR3tCNDUzXzYxWDdZXzRSfQ==
I can't decode it, Any help ?

appreciated

This is not a text. Maybe zip or other binary data inside.

gurlhackerclub - August 28, 2020, 6:55 pm

I'm gonna give you a hint. This is from a CTF.

Base64 the first part of what you know.
Base64 this.
FLAG{

Now, what do you get?

Thanks bro, i got it.

it's like a simulation of an error occurred during the encoding process.

"FLAG{" after decoding will be "RkxBR3s="

if i compared the result with the full decoded text i noticed that "[corrupted]" text will equal "kx"

so i replaced it to get "RkxBR3tCNDUzXzYxWDdZXzRSfQ=="

and after decoding it, i got the flag.
