Thread: [sql query to extract integer value from a specify date month](#)

blackcoder00 - August 29, 2020, 6:43 am

hi guys i have a problem i wanna extract sum of integer value from a specify month

exemple : 2020-11-05

Total sum = 14500 \$ where date = 2020-11-05

PHP Code

```
<?php
$getdatetwo = $_POST['two'];
$res=mysqli_query($con,"SELECT sum(gagner) from benefice where MONTH('date') = '
$getdatetwo' ");
```

PHP Code

```
<?php
<select name="two" class="dropdown-select">
```

```
<option>- MONTH -</option>
<option value="1">January</option>
<option value="2">February</option>
<option value="3">March</option>
<option value="4">April</option>
<option value="5">May </option>
<option value="6">June</option>
<option value="7">July</option>
<option value="8">August</option>
<option value="9"> September</option>
<option value="10">October</option>
<option value="11">November</option>
<option value="12">December</option>
</select>
```

i have used this code but it doesn't work

PS : date its a column in my DB MONTH('date')

Is your date column varchar or date

blackcoder00 - August 30, 2020, 12:24 am

date

newQuery - August 30, 2020, 3:35 am

Remove the single quotes from MONTH()

Charger - August 30, 2020, 4:15 am

^ And I don't think you can sum a text field

i have written this code and it's work fine

PHP Code

```
<?php
function convert($moneys){

    echo "<td>date Facture " . date("Y-m-d")."</td>";

    if (strlen($moneys) == 4) {
        echo " <td> Total Profite ".$moneys[0].",".$moneys[1].$moneys[2].$moneys[3]."</td>";

    }

    if (strlen($moneys) == 5) {
        echo " <td> Total Profite ".$moneys[0].$moneys[1].",".$moneys[2].$moneys[3].$moneys[4].
"</td>";

    }

    if (strlen($moneys) == 6) {
        echo " <td> Total Profite ".$moneys[0].$moneys[1].$moneys[2].",".$moneys[3].$moneys[4].
$moneys[5]."</td>";

    }

    if (strlen($moneys) == 7) {
        echo " <td> Total Profite ".$moneys[0].$moneys[1].$moneys[2].",".$moneys[3].$moneys[4].
$moneys[5].$moneys[6]."</td>";

    }if (strlen($moneys) == 8) {
        echo " <td> Total Profite ".$moneys[0].$moneys[1].",".$moneys[2].$moneys[3].$moneys[4].",".
$moneys[5].$moneys[6].$moneys[7]."</td>";
        echo "</tr>";
    }

}
```

```

// end function

// get month years data system
/*$date = date('Y',strtotime(date("Y-m-d"))); // 30
$month = date('m',strtotime(date("Y-m-d")));
$totalYears = $date ."-". $month;
*/
$totalYears = $_POST['two'];
$res1=mysqli_query($con,"select gagner from benefice");
$res=mysqli_query($con,"select * from benefice");
while($row=mysqli_fetch_array($res)){

    $datesdb = $row['date'];
    $datedb = date('Y',strtotime($datesdb)); // 30
    $monthdb = date('m',strtotime($datesdb));
    $totalYearsdb = $datedb ."-". $monthdb;

    while ($row1=mysqli_fetch_array($res1)) {
        if ($totalYearsdb == $totalYears) {

            $totalSum = $totalSum + $row1['gagner'];

        }

    }

    break;

}

}
}

convert(strval($totalSum));

```

Consider using `money_format` instead of manually doing the comma

blackcoder00 - August 30, 2020, 9:55 am

(Aug 30, 2020 05:46 AM)Charger Wrote: [\[CITE\]](#) Consider using `money_format` instead of manually doing the comma

hahaha i didn't know that there's a money format in php

newQuery - August 30, 2020, 10:47 am

(Aug 30, 2020 05:46 AM)Charger Wrote: [\[CITE\]](#) Consider using `money_format` instead of manually doing the comma

`money_format()` is deprecated in PHP 7.4.

OP don't rely on this method, check out `number_format` instead ;)
