Thread: [\[Complete Website\]Offerwall / Gain.gg Clone](#)

Exzib - September 1, 2020, 12:37 am

Hello, a while back I had an idea to make a offerwall website, the idea behind the site was that:

1. People can come to the site
2. Users do ads on our multiple offerwalls and receive LGC (looter.gg Coins)
3. Users can use the LGC to withdraw different things such as in-game items on runescape, csgo, giftcards and more
4. Users can referr other users to receive a % of their LGC earned
5. Users can compete on leaderboards for more rewards

All of the features above is done except for withdrawing, which is completely up to you if you are interested in this type of business.

The code base is made on Laravel for the backend, and Vue.js for front-end, the code is very well written and can easily be read by any intermediate laravel+vue developer.

I am looking to sell the source code for this project together with the implementation of the withdrawing + any other features you may want.

BIN is set at \$1,000, this is of course with setup, withdraw finish.

For \$1,200 I will throw in the original domain, looter.gg, which fits the project really well, as the main audience is Gamers.

Here is some screenshots of the project as of now, it is missing as mention withdrawing and a profile and some other blocks on the dashboard, but other than that the site is working very well, you can PM me for a demo.
