Thread: [Desktop Organizer app | Testing..](#)

fisica638 - September 2, 2020, 11:45 am

Hi all! , I have finished a new version of my Desktop Organizer program.

It doesn't seem to work on Windows 8.1, and I have no way of testing it.

Someone on the forum who has windows 8.1 and tries it. please.

I would also like to know your opinions, that you consider that the application should be changed or modified.

Official Page: [DesktopOrganizer](#)

Thank you !!

I'd check it out if you can put the source code on github.

Sorry bro, but I will not share the source code yet.

However, I need your opinions on the show. and have someone test it on Windows 8.1. you don't need the source code for this.

If it helps, I forgot to protect the source code.
You can check the source code with DnSpy.

Is there a necessity to protect the source code? Unless you are planning on reselling it in the future

perhaps.

Well I put a "Premium" license system on it with some special tools.
Obviously I had to protect him, but I forgot.

XD

Does anybody here really run windows 8? lmao

IGK4L - September 3, 2020, 1:44 pm

Uh, just run a VM with Windows 8 on it?
Sketchy
