I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,

Hello currently not for sell anymore i build a website where you can use this script on a vps server for 35\$ per month, soon it will be posted on hackforums.net

charles67 - September 16, 2020, 12:31 am

This makes alot of sense tho. Buy a builder and create your own smtps when you want or just buy ready made smtps that deliver for 48 hours. It's pricey

Yeah. They are not ready made, SMTP server will be build in less than five minutes automatically only for you with private control panel where you will be able to manage them.

NO sending limit is always unlimited.

The choice of the vps can drastically change inbox rate, i provide a list of good ones with the product.

john.corner143k - February 24, 2021, 2:51 pm

So all you are giving for \$275 is the script ?

Don't you think there are many such tutorials available for cyberpanel, box in a mail, webmin and so on... on youtube so why would people just buy the same thing for \$35 when its available for free??

Unless it has something different.. i mean you guys had different plans like \$100 \$300 , and it was a sure shot 100% inbox delivery..

No offence but even 10/10 score gets you to spam with gmail now a days.. so could you please elaborate what is it that we are getting for \$275 ??? Is it one of the above tools only or something different ???

yes you need a domain name and a vps server.

First plan on most vps server provider do the work ! around 3\$

and you can get .xyz domain for 1\$ on namecheap.com, i also provide some source to purchase

cheap good vps !

Ahah you just don't know what you purchase man it's tired ask questions before order before, of course you can do it yourself, and learn by your own this tool doesn't use magic to build smtp. It use knowledge that you don't have to learn. It also save time so it will not take you 3 days to build your smtp but just five minute. Have a great day man !

I had to go to works sorry to have a life. I've sent you message after that, asking you to send me details of your smtp. never got any response from you.

i have a couple questions.

- What exactly separates this tool from the similar, widely known and reputable tool atomic mail sender? Is it better? Is it inferior? Is there something this mail sender has that atomic mail sender doesn't?

- Does this tool verify the emails to make sure they're valid?

- What's the maximum amount of mails a day can I send with this tool?

1. This is not an email sender. Atomic mail sender still need smtp server to send out emails. So this tool give you the ability to build your own smtp server unless using pre-built in (if there is one in this software) or purchasing one on internet.

2. It doesn't verify anything it's an SMTP server, use ultimate mailer for that.

3. It's unlimited because it's your's.

you need to make some search about what is an SMTP server man ! It's something on what you connect and you told him that you want to send email here and here with this text etc.

NEW UPDATE !

SMTP BUILDER V3.5

- Works now with a webservice for more security.

will this send better if we use old domains? because with new domains or maybe because of VPS ,they dont send properly... send slow and bounce to email that exist..

old domain are always better. Slow sending is due to vps performance buy more cores and more ram to send faster or just build more smtp !
