My review of the SmS bomber:

This product is legit if you know how to use it. It took me 3 hours to setup but thats me, hahaha. I ran it through a VPS because i received a false-positive when i did the virus-total scan on the program. IF you know what your doing this is the program for you. It legit floods the phone but you really need a bigger combo-list. The seller should provide other ways of obtains these combolists with this product. 9/10 due to difficultly of really setting this up (the video tutorial wasn't that great) and because you have to find other ways of obtaining a good combolist. I will definitely buy this product! Good job Epic.

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,

It uses emails with the built in smtp checker to send them, so they would have to block each and every one of the emails essentially, which with the smtp checker supply csns always be added, on top of that. Once you spam it, they can block one at a time but the notifications as well as messages all come in from it before they block the one number as well.

It checks the whole list if it return only 300 valid then those where the good ones in the list, you need to check the box to send test email and only use the ones that successfully send a test email.

It says on the main OP post what needs to be done and what needs setup etc etc, have many many happy customers who has it just fine but you couldn't get it working even with clear as day instruction, your more than welcome to message me though and if it wasn't a lifetime licensed I'll extend the license for your purchase free of charge and see what we can get done with it.

It uses smtps and has a built in smtp checker, so. You can use that with a smtp list and check smtps and it will look like regular emails and end up in regular mail (Not spam) can also use your own smtp list

Have responded to every single rude message this customer has sent to me, impatient and rude every single reply

I have told him several times I can help more in debt on my day off and he continues to blow it up with not understanding the basics of the software. You click one button and import a combo list and click one more button to start, phone number import tells you if you import it wrong in the software and how to import it. It's Hass to help someone when everytime you try there responses are rather rude. I am busy at times and he expects me to drop life and everytging every time he gets on and replies. I make sure I help every customer that needs the help but some people to get busy, I've replied TO EVERY single message he has sent me as well. I will get the problems he's having taken care of guy just needs to listen and not be so impatient and rude.
