Thread: [VCW method in 2020?](#)

egzoski - September 10, 2020, 3:39 pm

How can I make it work, I tried downgrading flash player to 10.2 but it's impossible to do that unfortunately.

How do you VCW eWhores manage to pull this one out?

I was thinking of making a guide on this, but I use this method myself, and invested \$\$\$ into getting it working so im not sure.

as usual u can manycam.

If you're on Windows 7 then search for Flash Player in Control Panel, open it and go to the Advanced tab. In Trusted Location Settings, add the folders that contain the VCW files

Go to this link in Firefox to disable hardware acceleration under Global Settings

[www . flashmp3player .org/ demo. html](http://www.flashmp3player.org/demo.html)

Make sure the flash version you're using is [fp_10.3.183.11_archive](#)

But that's what I was saying, it's impossible to downgrade your flash player. Adobe doesn't allow access to the download page of their archived versions. If you know any way to work around it, maybe PM me?
