Thread: [What to do if you Changed your ip address and you still get banned from an site](#)

jumpforex - September 13, 2020, 7:22 am

So i got banned from an site and i change ip address and i cleared the cache and cookies then i tried to sign up again and i got banned again

Vpn's are not allowed on the site

- I changed ip address
- Clear Cache and Cookies

WHAT'S THE NEXT STEP??

Mr. Corleone - September 13, 2020, 7:41 am

They probably detect your proxy/VPN whatever you're using.
Install W10 on VMware and use [censored] or some shit like that to access the website.
You can find free [censored] accs if you look in the right spot.

Change your actual IP.
Check if you can change your IP settings to dynamic in your default gateway page.

Also, if you use shitty free VPN's/proxys, you'll obviously get detected.
So use a good one.

Well then spoof your MAC and use another browser.

jumpforex - September 13, 2020, 7:50 am

you know any free mac changers?

Mr. Corleone - September 13, 2020, 7:51 am

First result on google: (I've used this one too):

<https://technitium.com/tmac/>

Sigh..

It's spoofing idiot.

It's not actually changing your mac address.

TMAC does work. You could also change your MAC by going to your network devices' properties and changing the Network Address manually or using regedit.

Argonaut.exe - September 13, 2020, 1:24 pm

Why Multi acc to open same threads ?

<https://hackforums.net/showthread.php?tid=6108890>

At this point looks like Hacker Forum is your target lmao

Vpn's are not allowed on the site

-I changed ip address

-Clear Cache and Cookies

WHAT'S THE NEXT STEP??

Use tor proxy with privoxy. and then configure tor proxy so it bounce ip every 2-3 minute. so if your one ip got blocked than after changing ip you can try with other ip.

Free Kurdistan - September 13, 2020, 3:43 pm

Change your own IP instead of using a VPN is my suggestion.

SharkBite - September 15, 2020, 8:39 am

I've had this issue before, try [censored]. They have many servers to choose from. Some get

detected and some don't with trial and error. You can also find free openvpn profiles and vpn applications on your phone to attempt aswell. Not sure changing your mac address would do anything, unless they blacklisted your mac.

Another thing you could do is google "web proxy" and visit the site from that proxy site. Kproxy I think works, but there is thousands
(would not trust to login to any account)

(Sep 15, 2020 06:43 PM)tsuki Wrote: [\[CITE\]](#) A website cannot get your MAC address from your browser so spoofing it won't help in this case.

If you've changed your IP address and cleared your cache and cookies, then it's not quite clear how you're still getting found.

It could be your browser fingerprint, IP address range, e-mail address/domain, and many other things.

Buy a dedicated residential proxy and then try on a different browser.

Yeah I know.

Just said it cause nothing else made sense.
