PROXIO SOCKS5 Scraper and Checker

What is it?

Proxio is a new SOCKS5 proxy scraper coded in C#. It can currently test any list of "IP:PORT", and has the ability to scrape 10+ public sources and gather proxy lists automatically. Proxio can take any list of proxies, and output an "IP:PORT" list of all proxies that match a customizable country selection and timeout selection threshold. Source proxies are updated daily, so fresh proxies at any speed from any country can be obtained very quickly and easily. Don't like public proxies? Import your own list of proxies and export only the ones that meet your requirements!

Features

Proxy Scraper

Proxy Checker

Customizable Timeout/Country Selection

Fast, Multi-threaded Operation

Easy to Use

Bought 1 day license to test it out and works really well and gets the job done. Will be purchasing again in the future.

Best of luck with sales bro.

Right now it is only country specific not city. That can be something I add in a future update though

Are they premium sock5?

How soon will you implement the city specific

Is the price for lifetime?

The scraper is for 10+ public sources but you can import your own premium proxy list and check them. The most specific I could probably make it is down to state level which could be done in a couple of days. Price is \$20 BTC lifetime but will probably go up in the near future. Comes with free future updates
