Thread: [Requests/Status code](#)

SIM-4173254 - September 16, 2020, 4:02 am

Posting this in python as im working in python for the project

when I visit a (twitch) channel I get all of these requests to the cdn/api and a request is made to video-edge(...). however, when I try to emulate this all myself I get a 400 status code instead of the 204 on the browser.

Do you have a code snippet we could see, are you using headers and what information are you sending in the request, any example will do.

Check if you have correct headers, cookies and CSRF tokens if they are using one.
