Minecraft Manual Turbo/Snipe Method

How to claim some of the usernames you want before someone else gets it, this method is superior to most manual attempts, but there is always a chance of someone else being faster however unlikely/rare that is

Price: 4.99\$ USD

Payment method: Bitcoin, Paypal\* For trusted members only.

I have personally used this to snipe a few nice tags, PM me for info about OGs for sale.

Small briefing before we would start a contract.

This method is still working as of 17.09.2020, I do not see it getting patched, it is very easy to follow.

Do you have to spend any money each time you are sniping a name? Can it beat chearful.ninja?

No, you have to have a premium however. I am unsure if it beats chearful.

I have noticed however that some automated snipes are easily beaten, based upon a very small, but important detail.
