Thread: [hiring some one to create method amp or udp](#)

xdankpro - September 19, 2020, 7:26 am

Hello ,,
i wan to hire some one to create method for amp or udp

i will pay him good amount pm me if you bale to do it

Doomslayer - September 24, 2020, 9:48 am

Hey. Sent you a PM, however I am quite confused what you are asking.

My understanding is that you are looking for a DNS amplification method or a UDP attack, however you would need to be more specific as there are many UDP attacks out there. Most UDP attacks are either optimized for bandwidth or PPS and DNS amplification is a whole difference beast that would require IP spoofing/IPHM.

he's looking for someone to generate udp payloads, which technically isn't that difficult.

That's what I figured. I was confused as to why someone would want to pay for a simple UDP attack as most of them included in mirai and owari are customizable. Anyway, looking up "nmap udp payloads" will yield some results, but I can definitely make some custom payloads as most smart people will drop packets with those strings.

im looking for UDP method or amp method i will pm you in private

Drilla - September 25, 2020, 10:25 am

Okay I mean I have a few amp methods. Do you need help setting them up and scanning?
