GUI

It isn't extremely fancy, but it works and gets the job done.

Detection Rate

It's FUD scantime, and horrible when it comes to runtime. I'm talking detected by every major AV with internet off.

Scantime: <https://dyncheck.com/scan/id/126fcc8440488bd3c076e1d836bcb0b2>

Runtime: <https://dyncheck.com/scan/id/ceceacc69f6516db9a0e9560571223b7>

Features

Other than the standard macro builder features, it's not unique. It will download and execute your payload from the direct link once the client enables macros.

Overall, I think it's highly overpriced. The payload gets detected before it can download your binary.
