FatBurrito - September 21, 2020, 1:18 am

A tool to scour Instagram profiles for information such as: User ID, Full Name, Email Address, Follower/Following Count, Is Business? & the business category.

Github & direct download & FREE PROXIES available below:

Source: <https://www.instascraper.club/>

This was a project I made in order to learn as I go and then also made the website above for the same reason.

Proxy Support: In order to avoid limitations, HTTP/HTTPS proxies are supported. Simply import your proxy list along with your username list and click "START".

Multithreaded: Choose how many requests you make simultaneously by inputting your desired thread count.

Please do. It hasn't been updated in a while but if you have good proxies it should work.

Why do you have two threads of the exact same thing, AND begging someone to donate to you?
Lmfao you must be down cataclysmic.

I've released a basic proxy scraper created in python. You can see it in my threads if anyone is interested :)

The program gives you the option to check the proxy quality as well. Cheap and easy to use. Add as many URLs that you want.
