Thread: [Ran reaver](#)

elitesquad - September 22, 2020, 12:31 pm

When I ran reaver a few years ago it would stall around 20%, why?

This can occur due to many reasons, including but not limited to low range, and router lockdown, this lockdown happens when you try too many wrong pins, and it can probably be as long as a complete our in some routers

Rogers Communications - September 23, 2020, 2:06 pm

router lockdown happens about 99% of them

elitesquad - September 23, 2020, 5:42 pm

what programs are better to avoid this lockout? I've run Wireshark before but don't know how to read it.

Capture a handshake or a PMKID. WPS it pretty much deal in 99.9999999999 percent of cases now.

If you want to dumb it down to a program, use Wifite.

Otherwise hcxdump tool, bettercap, etc.
