Thread: [What Happened To My Ethereum?](#)

Blockonome - September 23, 2020, 5:28 am

Dear HF,

I am still a bit new in the cryptoscene, but I had a very small amount of ETH, which is now 0.00.....

Does this mean I have lost them, or I need to wait until they go back up? Or what happened?
Thanks for the help!

Looks like you have less than 1 cent worth so its showing a 0 account balance... looks to be just a low amount and price needs to just go up.

So once it goes up, then I will basically gain back my Ethereum and it is not bye bye for it?

Looks to me you still have a x.xxxxxx balance so when the price goes up you should see your dollar amount go up.. what you currently own is less than 1 cent so it cant show a monetary amount.

You will always have that balance but dollar value is nothing currently. You wont lose your balance just the dollar value.

Okay perfect, just wanted to be sure! Thank you, appreciate the help!

This is with Blockchain, not the best wallet from what I have heard? It doesnt look like they have been transferred or nothing

Voxcon - September 23, 2020, 8:56 am

To make sure your eth is still there, simply check your eth address balance at etherscan.io or any other ethereum block explorer.

0.00897 eth should be worth about \$3 at current market conditions.

Best regards,
Vox

Lol problem solved I guess, I logged into my wallet to get the wallet address and now I got my ETH back.... So I guess it was a mistake or something? None the less, thank you so much for the help!

Yeah the blockchain.com wallet is known for sometimes behaving weird (e.g. visual bugs etc.). If you know your address you can always check your balance at etherscan.io though.

Best regards,
Vox

Thank you! I appreciate it and you helped me out big time :D

shreder - September 23, 2020, 10:16 am

Jeez that'll give you a scare then haha. As suggest yeah always check on a explorer like <https://etherscan.io/> or <https://ethplorer.io/>

Hahaha definitely did scare me and thanks for helping out with these links, I was like either hacked or the ETH had gone down real bad xD

popZmoke - September 23, 2020, 10:22 am

Did you check ur open orders? Maybe u have set up a sell order somewhere.

It was a mistake from the platform I think, I have not done anything with my ETH :)
