Thread: [\[FREE\] Make **unlimited free** Residential proxies or 4G Mobile proxies](#)

loadman - September 26, 2020, 9:29 am

the method for creating unlimited free Residential/4G mobile proxies with a few presses without paying a single penny.

Basically, all 4G mobile proxies are residential proxies so we'll use these terms interchangeably. 4G mobile proxies are created from cellular connections through SIM cards. They're considered residential proxies because they're allocated in residential areas for residential use except they are superior to regular residential proxies when it comes to botting/automation because they make it a lot harder to detect that it's a proxy. Proxies created with this method are impossible to detect.

The app is called "Proximize Android" and you can search for it on the Google Play Store or download it using this link: <https://play.google.com/store/apps/details?id=com.proximize>

It will generate some text that looks like this: abc.proximize.com:12345:abc123:cba321

In this case:

abc.proximize.com << Is the IP we use to connect to the proxy
12345 << Is the proxy port
abc123 << Is the proxy username
cba321 << Is the proxy password

quick demo

[Video: <https://www.youtube.com/watch?v=tP94w51X5xl>]

proxies created with this method will be superior to all other proxies as you have complete control over them and you know for sure they're not abused by some shady provider or sold somebody else.

As with any proxy, if you plan to use these in a browser make sure to prevent the usual IP leaks/fingerprints. recommend you use a dedicated privacy browser and not regular ones since these are easy to detect because of faults in the browsers and the proxy has no control over this.
