Thread: [Hacking wifi using android](#)

Villan - September 26, 2020, 10:58 am

There are many wifis which are having less security
That can breach or hack easily using some applications

1.wps wpa tester

2.wps connect

3.androdumper

First wps wpa tester is one of the best application

To hack wifi which are wps encrypted. Now install this application from playstore or from the internet

Follow the steps.

Step-1

Open the application and tap on search

Step-2

It shows the list of wifi available in your area

Step-3

1.If Wifi's colour is red then it is wpa password protected and cannot be hacked .

2 if the colour is yellow then it can be hacked. First click on the wifi select new method then select all custom pin method.if u r lucky it will automatically connect to that wifi

3.if its colour is green then your lucky it can be 100% hacked just click on new method try all pins.but this time it will definitely connect to that wifi.

THE PROCESS IS SAME FOR ALL THE APPS

if you want to know the password the phone must be rooted or try using any MI mobile connect to wifi by above process the open you wifi and tap on your wifi which is connected it will show you the Password in the form of QR code take a screenshot or scan it using other mobiles .you can see the password.

Thanku and enjoy internet for free
