Just made [disallowed].no config, works great!

Selling it to first person asking for it and no one else!

I just wanted to start by giving this gentlemen a huge vouch. He definitely knows his stuff. There was a website I have been trying to crack accounts from for a while, and have been having trouble finding someone that actually knows what they're doing. I reached out to him, and within a few minutes of the conversation he was already getting busy making things happen. He actually went above and beyond what I expected him to. It's rare to find genuine people nowadays that aren't out to get over or scam. If you're thinking about getting a config file made/fixed/whatever... he is the man to see.

Openbullet is an automation software, what its usually used for is credential stuffing:

Please do not hijack my thread, PM him if you have any business to discuss with him thank you.

I have not much experience with cracking aside from some LoL cracking with sentry back in the day.

Is it hard to work with openbullet for me to crack a game if you create the config?
And how realistic is a checker and how much would that cost all together?

I wouldn't mind a config for a few websites.

Let me know whenever you are online and ready again.

Hey OP, is this service still available?
