Thread: [Activate the connection to MOBILE DATA after disconnecting](#)

**geikus** - October 8, 2020, 10:23 am

Hello. I installed SpyMax2 on a Huawei 9 lite phone, everything is functional, but the internet connection is only on MOBILE DATA (the person does not have WI-FI). How can I activate the connection to MOBILE DATA after disconnecting it? Is there any APK or setting to reactivate the connection 5-10 minutes after disconnecting it? Thank you!

Write your own code.

You could easily implement this if you made your own software, just periodically check whether the connection is available and re-connect once it is.

You could easily implement this if you made your own software, just periodically check whether the connection is available and re-connect once it is.

But I don't think it's too easy to write a phone code ...

I want it to connect automatically after that person closes mobile data. Activate automatically 10 minutes after shutting down mobile data.

Droidjack v4 has this feature, but it turns on when you call the device.
