Thread: [Chromebook hacking \(question\)](#)

Mirrie281 - October 9, 2020, 6:38 am

hi guys im new. im a totally newbie in this and i want to learn hacking but the problem is i only got a chromebook. my question is can you do hacking on a chromebook and how can i do it?

thanks!?

What sort of hacking are you looking to do?

I mainly want to learn for now, but I would like to crack passwords

A chromebook unfortunately will not suffice for cracking passwords due to this requiring a high end CPU or GPU.

I'd recommend trying to USB boot Kali linux onto your CB and watching some youtube tutorials based around hashcat, aircrack and the other baseline tools. If you're looking into webapp testing check out resources like OWASP, Portswigger and Pentesterlabs.

If Kali seems a little confusing at first, familiarize yourself with the Linux enviroment by installing ubuntu. <https://ubuntu.com/tutorials/install-ubuntu-on-chromebook#1-overview>

as chromebook works on android, you should look into android rat for this.

That's a very good question, seems it's a based on Linux there is probably some things to do, did you try to run a terminal ? Is there something equivalent on Chrome OS ?

ruddian - *October 10, 2020, 12:55 pm*

ChromeOS is fucking disgusting. invest into your hacking career and buy a proper computer with a proper os mate

FaKeSD - *October 11, 2020, 6:33 am*

Try to install Kali Linux onto the computer via USB or by booting from it.

or you can buy a cheap linux computer such as PineBook.

Etherrealm - *June 22, 2021, 1:41 pm*

I have a chromebook and it allows me to use the Beta debian penguin linux. So you should be able to disable os chrome and install that Beta version of linux. It's not the best, but if you put in the key search you'd like with the terminal saying it like so... Sudo apt search [Keyword] ... Then you should be able to find what you'd like to use. The fact that you want to password crack though might be little bit more difficult, but it can be done. Also Wireshark is a good way too if you're trying to get ips from the packets coming into your router.
