Thread: [exchange coin to coin & stable coin](#)

Think1st - October 13, 2020, 11:47 am

Got 2 quick questions

1) how do people exchange ex btc to XMR or ETH to BTC ?

2) Also what is the best stable coin to hold & buy a coin if let's say i believe a coin will drop to get a better price ?

Hopefully both answers are for someone who doesn't kyc like me so yeah. Thank you

1. They use an exchange like Binance or Coinbase Pro

2. Tether (USDT)

2. Tether (USDT)

For answer 1 aren't they both KYC

also for answer 2 USDT safe for someone who doesn't kyc ?

You can use Binance without KYC but there is a 2BTC daily withdrawal limit

If you are looking to swap tokens without KYC, you should check [coinswitch.co](#) or Uniswap

No KYC is required for the use of Tether. It's just a cryptocurrency.

But if you prefer a Stablecoin not backed by a third party, there is DAI
