Thread: [Trying to connect to database and get info](#)

-PUBG- - October 15, 2020, 9:23 pm

I am no good in PHP I am using this check function for my C# application issue being it 500 errors on a certain function in the php

Here is the code

PHP Code

```
<?php
$link = mysqli_connect("localhost", "DB_NAME","DBPASSWORD");
$database = mysqli_select_db($link, "DB_NAME");

$user = $_GET['username'];
$password = $_GET['password'];
$tables = "mybb_users";

$sql = "SELECT * FROM ". $tables ." WHERE username = '". mysqli_real_escape_string($link,$user)
) ."'";
$result = $link->query($sql);
if ($result->num_rows > 0) {
    // Outputting the rows
    while($row = $result->fetch_assoc())
    {

        $password = $row['password'];
        $salt = $row['salt'];
        $plain_pass = $_GET['password'];
        $stored_pass = md5(md5($salt).md5($plain_pass));

        function Redirect($url, $permanent = false)
        {
            if (headers_sent() === false)
            {
                header('Location: ' . $url, true, ($permanent === true) ? 301 : 302);
            }
            exit();
        }

        if($stored_pass != $row['password'])
        {
            echo "p0<br>"; // Wrong pass, user exists
        }
        else
        {
            echo "p1<br>"; // Correct pass
        }
    }
}
```

```
        echo "g" . $row['usergroup'] . "<br>";
    }
}
?>
```

It gives the 500 error on this

PHP Code

```
<?php
$result = $link->query($sql);
```
